

Listed Hunter Supplier Declaration – for the Supply of Hunted Animals for Human Consumption

This declaration is a way of meeting requirements under s81A of the Animal Products Act 1999 for the purpose of compliance with clause F2.7 of the Animal Products Notice: Production, Supply and Processing.			
Listed hunter name and identification number:	Gus Gordon 0		
Names of all other hunters involved in this consignment:			
Animal material depot or primary processor RMP identifier:	000	Date of arrival at animal material depot or primary processor (ddmmyy):	25/03/26
Number and species of hunted animals/sticks of velvet covered by this declaration:	22 Red Deer, 0 sticks of velvet		
Registration number of any helicopter used for this consignment:	IXX		

Consignment details and poison use (see note 1):

Unique identifier for each carcass/ group of carcasses (see note 2)	Kill location: GPS co-ordinates or topographical map identifier(s) (see note 3)	Date and time killed (ddmmyy; hh:mm)	Date and time subject to refrigeration at animal material depot or primary processor (ddmmyy; hh:mm)
17	-43.44412966666667, 169.822648	25/03/26; 10:07	
18	-43.4441635, 169.82248	25/03/26; 10:07	
19	-43.44504050000001, 169.8193533333337	25/03/26; 10:21	
20	-43.44549900000001, 169.8197373333336	25/03/26; 10:22	

Additional information:

a.	Can you confirm that these animals were procured in accordance with your Operations Manual?	☒ YES	☐ NO
b.	Can you confirm that none of the animals have been recovered from poisoned land or buffer zones within the applicable caution periods, as described in note 4?	☒ YES	☐ NO
c.	Can you confirm the animals when live, and their carcasses, were free from visible signs of illness or disease?	☒ YES	☐ NO
d.	Can you confirm, to the best of your knowledge, that the carcasses are below the MRL and MPL (see note 5)?	☐ YES	☐ NO
e.	Can you confirm, to the best of your knowledge, that these animals had not ingested agricultural chemicals and are outside the withholding period for any veterinary medicines (see note 6)? If no, these animals are not eligible for processing.	☒ YES	☐ NO
f.	Can you confirm that the carcasses, while under your control, were maintained under conditions that minimise contamination and deterioration, and not frozen?	☒ YES	☐ NO
g.	Can you confirm that all deer covered by this declaration, were killed in Tb vector free areas, as described in note 7? (leave blank if no deer were supplied).	☒ YES	☐ NO

Declaration: I understand that this declaration must be provided to, and will be retained by the primary processor. I understand that the primary processor may be required to provide a copy of this declaration to the Ministry for Primary Industries to meet their requirements under the Animal Products Act 1999. I declare that: - I am the Listed hunter who directly supervised or carried out the hunting, killing, and dressing (as appropriate) of the wild animals which this declaration applies to; and - the information provided in this form is true and accurate.	Listed hunter signature:	
	Date:	02/06/26
	It is an offence under section 127 of the Animal Products Act 1999 to provide false or misleading information in this declaration. Under the Privacy Act 2020 you have certain rights of access to and correction of personal information held about you.	

Notes

1. Consignment Details

Use additional signed and dated pages if more space is needed to list the carcasses in the consignment covered by this declaration.

2. Identification of groups of hares, rabbits or wallabies

You may tag or otherwise identify *groups* of animals where they:

- a. are covered by a single poison use statement or DOC Pesticide Summary, as appropriate; and
- b. have been taken from areas of land that have the same poisoning status; and
- c. have been killed on the same date; and
- d. have been hunted, killed and dressed by or under the direct supervision of the same Listed Hunter.

Otherwise you must tag or otherwise identify each individual carcass.

3. Hunt and kill location information

Kill location means, in relation to a hunted animal, the place where the animal came to rest immediately after it was killed or, where safety was an issue, as close to that point as can safely be recorded.

Kill location information provided by listed hunters must be in the form of the required GPS data, unless topographical maps can be used as an alternative (see below).

Despite what is specified above a listed hunter may identify the kill location of a hunted animal by a topographical map grid reference point if either of the following apply:

- a. the hunted animal is a rabbit, hare, or wallaby and the hunter hunted the animals on the ground, or from ground conveyances, on areas of land identified in the relevant Operations Manual as an area for which topographical grid references may be provided; or
- b. the listed hunter is unable to provide GPS data because of a technical failure outside the control of the listed hunter (i.e. not including poor maintenance or lack of knowledge of the GPS system) and:
 - i. the kill location of each animal is identified by grid reference on a topographical map; or
 - ii. the processor tests each affected carcass for poison residues and does not process the material unless the residue levels are acceptable.

The required GPS data is:

- a. the GPS system used; and
- b. the date of the hunting activity; and
- c. the time and GPS co-ordinates of the kill location; and
- d. the GPS co-ordinates at the start and finish of the hunting flight or ground hunting trip; and
- e. in the case of an aerial hunt:
 - i. the GPS co-ordinates (in NZTM2000) at the start and finish of the hunting flight; and
 - ii. the flight data points, including altitude, taken in a continuous record at a maximum of 10 second intervals, for the entire hunting flight and for each flight used to transfer carcasses (This form does not provide for this and must be supplied separately).

This means in addition to the information provided in this declaration form, a listed hunter must also provide the processor with data on the GPS system used and co-ordinates of the start and finish of the hunting flight or ground hunting trip.

4. Poison Use

Animals must not be presented for processing if they were procured from land on which any of the following poisons were laid, or within the applicable buffer zones of that land, unless the applicable caution period for that poison has passed between the time the poison was laid and the time the animal was procured. The applicable buffer zones and caution periods for each poison are set out in the table below.

Despite the table below, as stated in clause F2.9 of the Animal Products Notice: Production, Supply and Processing, a listed hunter may present hunted animal material procured from poisoned land or buffer zone land for primary processing if:

- a. the animal is not a pig; and
- b. the relevant land was not administered by the Department of Conservation; and
- c. all poisons used were:
 - i. poisons in group 1, 2 or 3 in the above table; and
 - ii. used solely in bait stations that were correctly situated and used; or
 - iii. used solely in buildings that could not be accessed by the applicable animal; or
 - iv. otherwise inaccessible to the animal due to impassable geographical features (such as rivers, sea, cliffs or steep ravines); and
- d. the responsible person completing the poison use statement believes that any poison used was not, or was not likely to have been, accessed by the applicable animal.

A “bait station” is a rigid device or container designed or adapted to physically contain baits in such a way as to:

- a. allow unrestricted access by target pests while preventing or minimising spillage of bait and access to off-target species; and
- b. protect baits from the elements and extend their usable life.

Despite this, a listed hunter may present hunted animals procured from within the buffer zone land of a sanctuary to which poison has applied and within the caution period if the poisons were in group 4 in the above table and were used within the boundaries of a sanctuary that could not be accessed by the animals (due to predator proof fencing other geographical boundaries).

5. MRL and MPL

MRL means, in relation to a residue, the maximum permissible level of that residue as specified in the Food Notice: Maximum Residue Levels for Agricultural Compounds. MPL means the maximum permissible level at which a substance may be present in animal material or animal product as specified in the current edition of the Animal Products Notice: Maximum Permissible Levels.

6. Veterinary Medicines

If you have killed animals and believe they are within a withholding period for a veterinary medicine they must not be presented for processing. If you do not know the withholding period for a veterinary medicine, the following default periods apply and is the time which must pass before the animals can be killed for processing:

- a. 91 days for ruminants such as deer, goats, tahr, chamois and buffalo;
- b. 63 days for monogastrics and camelids such as pigs and wallabies.

7. Tb Vector Risk Areas

A map of bovine tuberculosis Vector Risk Areas can be found here www.ospri.co.nz/tb-and-pest-control/hunters

8. Electronic Submission

This declaration may be provided electronically, but only with the consent of the recipient.

Poison group		0	1	2	3	4
Poison		Cholecalciferol Hydrogen cyanide Phosphorus Potassium cyanide Sodium cyanide	Zinc phosphide Para-aminopropiophenone Sodium nitrite Any other poison not covered in groups 0, & 2 to 4	Diphacinone Pindone	Coumatetralyl 1080	Brodifacoum Difethialone Bromadiolone Flocoumafen Difenacoum
Caution period (all species)		None	1 month	2 months	4 months	3 years
Buffer zone	Rabbits	0	200m	200m	200m	200m
	Hares, tahr, and wallabies	0	1km	1km	1km	1km
	Goats, chamois, deer, sheep, and buffalo	0	2km	2km	2km	2km
	Pigs and other species	0	2km	2km	2km	5km
